

# EVERBRITE COATINGS

## SURFACE INNOVATION INDUSTRIAL COATINGS Everbrite Coatings are Ideal When Conditions are Not

Our clear coating systems meet the diversity and durability needs of industrial and commercial facilities with products to restore and protect metals and other surfaces from environmental damage such as oxidation, tarnish and the growth of microbes. Our coatings are easy to apply and easy to maintain indefinitely.

Everbrite Coatings are ideal for high touch surfaces where appearance, longevity and pristine cleanliness matters. Our coatings are free from carcinogens, for the safety of those that apply the products, and live and work with coated surfaces.

### EVERBRITE™

Everbrite™ is a clear, protective UV coating formulated to restore color and luster to dull, faded, oxidized metal of any color.

### PROTECTA<sup>Clear</sup>®

ProtectaClear® is a tough, thin, clear coating for high touch surfaces providing protection from salt damage, tarnish, corrosion, and oxidation.

### CROBIAL COAT™

MICROBAN®

CrobialCoat™ with Microban antimicrobial technology is a clear coating providing protection for most surfaces from environmental damage, while helping to prevent the spread and growth of microbes.

### EQUIPCOAT™

EquipCoat™ is a long-lasting, clear polymer resin coating that protects heavy duty equipment from rust and oxidation, and also restores faded paint color to pre-owned equipment.

## Antimicrobial Technology

CrobialCoat™ was tested and proven to reduce bacterial growth by 99% in a 24 hour period. This effectiveness will last the life of the coating, as Microban antimicrobial technology is built into the coating and will not wash off.

Unprotected surfaces can breed odor-causing bacteria, which can double in number every 20 minutes. This can cause the development of stains, unpleasant odors and bacteria which impacts the aesthetics, durability and cleanliness of a surface. In many circumstances, once microbes have begun to proliferate on a surface, constant cleaning is required to keep growth under control. Constant cleaning may not be the most reasonable or economic solution. CrobialCoat™ is the solution for durable corrosion and microbial protection.

*Recognizing that the ability to clean constantly is unreasonable in most environments, the best weapon against microbial growth is antimicrobial coating with built-in protection.*

**CrobialCoat™ with Microban Antimicrobial Technology offers essential and long-lasting protection to promote healthy environments.**

## Gyms

- Keeping Members Healthy & Safe
- Protecting High Touch Surfaces
- Protecting Pool/Sauna Surfaces from Rust & Chemical Corrosion
- Maintaining Fresh Look Makes it Easier to Sell Memberships
- Easy to Maintain with Current Staff

CrobialCoat™ with Microban antimicrobial technology is ideal for helping ensure a foundation for healthy environments. By providing a coating to help prevent the growth and spread of microbes on high-touch surfaces CrobialCoat provides a layer of protection for health and wellness of guests in between cleanings. The coating, which lasts years without having to be reapplied, provides peace-of-mind during trying times.

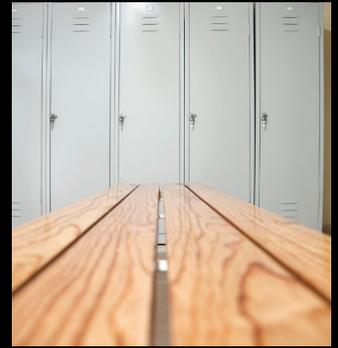

### Free Weights

Free weights have 362 times more germs than a toilet seat. Free weights are high touch and high use surfaces, making them prone to bacteria spread. Coating with CrobialCoat will protect members' health and safety in your gym.

### Locker Rooms

In addition to being high touch surfaces, lockers and benches can be exposed to moisture, chlorine and other particles in the air, leading to bacteria growth that can be easily spread and cause odor. Minimize the growth of bacteria and keep surfaces looking new and clean with CrobialCoat.

### Drinking Fountains

A communal source of water, drinking fountains can harbor dangerous bacteria and microbes. CrobialCoat will not only prevent the growth of microbes, but also protect the surface from tarnish and scratching, which often happens when metal water bottles are refilled.

### Bathroom Surfaces

Bathroom surfaces can harbor bacteria due to increased moisture in the air as well as high use. Coating all hard surfaces in the bathroom will help greatly to inhibit bacteria growth and odor. Keep bathrooms clean, safe and comfortable for members by using CrobialCoat.

### Pool Hardware

Pool railings in gyms are not only exposed to chlorine and moisture in the air, but are high touch areas as well. To keep members safe from bacteria spread, as well as preserve your metal from tarnish and rust due to chlorine in the air, use our CrobialCoat.

### Saunas

With saunas being so humid, they are the perfect environment for bacteria to grow and spread. Using CrobialCoat, which works on wood, ceramic, as well as metal and hard plastics, reduces bacteria growth by 99% which reduce odors, mold and mildew while keeping members safe and healthy.
